Q

PoiNode 对象

createPoiNode

创建 poiNode 对象。可以插入任何 DOM 元素,并且保留其交互事件。

样例:

定义:

```
interface PoiNodeInfo extends BaseObject3DInfo {
  type: PoiNodeType;
  element: HTMLElement;
}

function createPoiNode(poiNodeInfo: PoiNodeInfo): PoiNode;
```

Q

用法:

```
const el = document.createElement('div');
el.innerHTML = '一段文字';
ssp.createPoiNode(
   type: '3d',
   element: el,
   id: 'xx',
   name: 'xx',
   level: {
     max: 1000,
     min: null,
   },
   position: { x: 0, y: 0, z: 0 },
    rotation: { x: 0, y: 0, z: 0 },
   scale: { x: 2, y: 2, z: 2 },
   userData: {},
);
```

参数:

poiNodeInfo

• 描述: 实例 PoiNode 对象所需信息

• 类型: PoiNodeInfo

• 必填: 🗸

PoiNodeInfo

属性	描述	类型	必填	默认值
type	展示模式	PoiNodeType	✓	
element	DOM 元素	HTMLElement	✓	

id	唯一ID	string number	~	
name	名称	string	X	
level	显示层级范围	Level	X	{ max: null, min: null }
position	位置坐标	Position	×	{ x: 0, y: 0, z: 0 }
rotation	旋转弧度	Rotation	×	{ x: 0, y: 0, z: 0 }
scale	缩放比例	Scale	×	{ x: 1, y: 1, z: 1 }
userData	用户数据	any	X	{}

getPoiNodeByld

通过 id 查找

定义:

```
function getPoiNodeById(id: PoiNodeInfo['id']): PoiNode | null;
```

用法:

```
const poiNode = ssp.getPoiNodeById('xxx');
```

getPoiNodeByName

通过 name 查找

Q

定义:

```
function getPoiNodeByName(name: string): PoiNode[];
```

用法:

```
const poiNodeList = ssp.getPoiNodeByName('xxx');
```

getAllPoiNode

获取所有 PoiNode 对象

定义:

```
function getAllPoiNode(): PoiNode[];
```

用法:

```
const allPoiNodeList = ssp.getAllPoiNode();
```

getPoiNodeByUserDataProperty

通过 userData 属性查找

定义:

Q

```
value?: any
): PoiNode[];
```

用法:

```
const poiNodeList = ssp.getPoiNodeByUserDataProperty('propKey', 'propVal')
// or
const poiNodeList = ssp.getPoiNodeByUserDataProperty(item => item['itemPropKe'])
```

参数:

propNameOrFindFunc

- 描述: userData 内属性名或 find 函数
- 类型: string | function
- 必填: 🗸

propValue

- 描述: userData 内属性值。
- 类型: any
- 必填: X

find 函数使用场景

```
poiNode.userData = {
  people: {
    name: 'xiaoming',
    age: 18,
  },
};
const poiNodeList = ssp.getPoiNodeByUserDataProperty(
    (userData) => userData?.people?.name === 'xiaoming'
);
```

Q

removePoiNodeByld

通过 id 移除

定义:

```
function removePoiNodeById(id: PoiNodeInfo['id']): boolean;
```

用法:

```
ssp.removePoiNodeById('xxx');
```

createPoiNodeToGroup

创建 poiNode 到一个组内。

定义:

```
function createPoiNodeToGroup(
  groupInfo: GroupInfo,
  poiNodeInfoList: PoiNodeInfo[]
): Group;
```

用法:

```
ssp.createPoiNodeToGroup(
  // groupInfo
  {
```

Q

```
},
// poiNodeInfoList
[poiNodeInfo1, poiNodeInfo2, poiNodeInfo3]
);
```

参数

groupInfo

• 描述: 实例组对象所需信息

• 类型: GroupInfo

• 必填: 🗸

poiNodeInfoList

• 描述: poiNodeInfo 集合

• 类型: poiNodeinfo[]

• 必填: 🗸

createGroupForPoiNode

为 poiNode 提前创建一个空组。

使用场景

与 createPoiNodeToGroup 不同,有些时候可能你还没有具体的 poiNodeInfo 数据,但你想提前创建一个批量管理的空组,当有数据时再使用 addPoiNodeForGroup 插入。

定义:

function createGroupForPoiNode(groupInfo: GroupInfo): Group;

ts

Q

用法:

```
ssp.createGroupForPoiNode({
   id: 'firstPoiNodeGroup',
   name: 'name_firstPoiNodeGroup',
   // ...
});
```

参数

groupInfo

- 描述: 实例组对象所需信息
- 类型: GroupInfo
- 必填: 🗸

addPoiNodeForGroup

向一个已经存在的组内添加 poiNode 对象。

定义:

```
function addPoiNodeForGroup(
  groupId: GroupInfo['id'],
  poiNodeInfoList: PoiNodeInfo[]
): Group | null;
```

用法:

```
ssp.addPoiNodeForGroup(
  // groupId
  'firstPoiNodeGroup',
```

```
(progress) => console.log('进度信息: ', progress)
);
```

参数

groupId

- 描述: 组 id
- 类型: GroupInfo['id']
- 必填: 🗸

poiNodeInfoList

- 描述: poiNodeInfo 集合
- 类型: poiNodeinfo[]
- 必填: 🗸

getPoiNodeGroupById

通过 id 查找 poiNode 组

定义:

```
function getPoiNodeGroupById(id: GroupInfo['id']): Group | null;
```

用法:

```
const group = ssp.getPoiNodeGroupById('firstPoiNodeGroup');
```

getPoiNodeGroupByName

Q

Q

定义:

```
function getPoiNodeGroupByName(name: string): Group[];
```

用法:

```
const groupList = ssp.getPoiNodeGroupByName('name_firstPoiNodeGroup');
```

removePoiNodeGroupByld

通过 id 移除 poiNode 组

定义:

```
function removePoiNodeGroupById(id: GroupInfo['id']): boolean;
```

用法:

```
const isRemoveSuccess = ssp.removePoiNodeGroupById('firstPoiNodeGroup');
```

clearPoiNode

清除当前场景内所有 poiNode 对象。

定义:

Q

用法:

```
ssp.clearPoiNode();
```

showAllPoiNode

显示当前场景内所有 poiNode 对象。

定义:

```
function showAllPoiNode(): void;
```

用法:

```
ssp.showAllPoiNode();
```

, -

hideAllPoiNode

隐藏当前场景内所有 poiNode 对象。

定义:

```
function hideAllPoiNode(): void;
```

用法:

Q

← Poi 对象

空间画布对象 →
