# clipping-controls

npm@latest v2.2.0

模型与场景切割。

# 样例

### 安装

```
npm install @soonspacejs/plugin-clipping-controls -S
# or
yarn add @soonspacejs/plugin-clipping-controls -S
```

## 使用方法

```
import SoonSpace from 'soonspacejs';
import ClippingControlsPlugin from '@soonspacejs/plugin-clipping-controls';

const ssp = new SoonSpace({
    el: '#view',
    options: {},
    events: {},
    });

const clippingControlsPlugin = ssp.registerPlugin(
    ClippingControlsPlugin,
    'clippingControlsPlugin'
);
consolo.log(clippingControlsPlugin);
```

### 方法

### modelClipping

模型切割

#### 定义

```
interface ModelClippingOptions {
   axis: AxisType;
   clipPercent: number;
   isForward?: boolean;
   openHelper?: boolean;
}

function modelClipping(
   model: BaseObject3D,
   options: ModelClippingOptions
): void;
```

#### 用法

```
clippingControlsPlugin.modelClipping(model, {
   axis: 'x',
   clipPercent: 50,
   isForward: true,
   openHelper: true,
});
```

#### 参数:

#### object

• 描述: 模型对象

• 类型: BaseObject3D

• 必填: 🗸

#### options

• 描述: 配置选项

• 类型: ModelClippingOptions

• 必填: 🗸

#### ModelClippingOptions

属性	描述	类型	必填	默认值
axis	坐标轴	AxisType	<b>✓</b>	
clipPercent	百分比(0 - 100)	number	<b>✓</b>	
isForward	是否正向切割模型	boolean	X	true
openHelper	是否开启切割辅助面	boolean	X	true

### removeModelClipping

移除模型切割 (还原状态)

#### 定义

```
function removeModelClipping(model: BaseObject3D, axis?: AxisType): void;
```

#### 用法

```
clippingControlsPlugin.removeModelClipping(model, 'x');
```

#### 参数:

#### object

• 描述: 模型对象

• 类型: BaseObject3D

• 必填: 🗸

#### axis

• 描述: 轴线

• 类型: AxisType

• 必填: 🗡

### sceneClipping

场景切割

#### 定义

```
interface SceneClippingOptions {
   axis: AxisType;
   clipPoint: number;
   isForward?: boolean;
   openHelper?: boolean;
}

function sceneClipping(options: SceneClippingOptions): void;
```

#### 用法

```
clippingControlsPlugin.sceneClipping({ axis: 'x', clipPoint: 500 });
```

#### 参数:

#### options

• 描述: 配置选项

• 类型: SceneClippingOptions

• 必填: 🗸

### SceneClippingOptions

属性	描述	类型	必填	默认值
axis	坐标轴	AxisType	<b>✓</b>	
clipPoint	切割点的位置	number	<b>✓</b>	
isForward	是否正向切割场景	boolean	X	true
openHelper	是否开启切割辅助面	boolean	X	true

## removeSceneClipping

移除场景切割 (还原状态)

### 定义

```
function removeSceneClipping(axis?: AxisType): void;
```

#### 用法

```
clippingControlsPlugin.removeSceneClipping('x');
```

#### 参数:

#### axis

• 描述: 轴线

• 类型: AxisType

• 必填: X
