类型定义

这里会集中详细介绍 SoonSpace.js 内部的基础接口和类型定义,这些 **接口和类型** 会在后续的文档字段类型描述时使用。

```
类型定义使用 TypeScript Interfaces 公、Literal Types 公特性方式展示。如下:
IVector2 表示该接口必须具有 x、y 俩个属性,属性类型为 number;
IVector3 表示从接口 IVector2 继承属性名定义后,扩展 z 属性,属性类型为 number;
IColor 定义该值类型应该为 string 或者 number;
AxisEnum 定义该值类型为 string ,且具体可选枚举为 x | y | z 。 …
```

IVector2

二维向量

```
interface IVector2 {
    x: number;
    y: number;
}
```

PlanelVector2

平面二维向量

```
interface PlaneIVector2 {
    x: number;
    z: number;
}
```

localhost:8081/guide/types.html

ts

IVector3

三维向量

```
interface IVector3 extends IVector2 {
  z: number;
}
```

Position

空间坐标点

```
interface Position extends IVector3 {}
```

Rotation

旋转弧度

```
interface Rotation extends IVector3 {}
```

Scale

空间缩放比

```
interface Scale extends IVector3 {}
```

Level

localhost:8081/guide/types.html 2/7

ts

ts

```
interface Level {
 max: number | null;
 min: number | null;
}
```

ScaleFixed

缩放比例固定

支持 Poi、PoiNode

```
interface ScaleFixed {
  originScale: number;
  fixedScale: number;
  distance: number;
}
```

OffsetPoint

偏移量

```
interface OffsetPoint {
  offsetX: number;
  offsetY: number;
}
```

AxisType

空间轴类型

```
type AxisType = 'x' | 'y' | 'z';
```

localhost:8081/guide/types.html 3/7

SceneEventType

场景触发事件类型

```
type SceneEventType = 'hover' | 'click' | 'rightClick' | 'dblClick';
```

PoiType

Poi 展示类型

```
type PoiType = '2d' | '2D' | '2.5d' | '2.5D';
```

PoiNodeType

PoiNode 展示模式类型

```
type PoiNodeType = PoiType | '3d' | '3D';
```

IColor

颜色

```
import type { ColorRepresentation } from 'three';

type IColor = ColorRepresentation;
```

FlyToViewpoint

localhost:8081/guide/types.html 4/7

```
type FlyToViewpoint =
  | 'current'
    'top'
    'bottom'
    'front'
    'back'
    'left'
   'right'
    'frontTop'
    'backTop'
    'leftTop'
  | 'rightTop'
    'leftFrontTop'
  | 'rightFrontTop'
    'leftBackTop'
  | 'rightBackTop';
```

BaseObjectInfo

基础对象创建时的参入参数(BaseMesh、Point 等等)

```
interface BaseObjectInfo {
   id: string | number;
   name?: string;

//
   level?: Level;
   visible?: boolean;

//
   position?: Position;
   rotation?: Rotation;
   scale?: Scale;

//
   userData?: any;
}
```

localhost:8081/guide/types.html 5/7

BaseObject3DInfo

基础 3D 对象创建时的参入参数(BaseObject3D、Poi、PoiNode 等等)

```
interface BaseObject3DInfo extends BaseObjectInfo {
   //
   onLoad?: ((object: Object3D) => void) | null;

   //
   onClick?: ((object: Object3D) => void) | null;
   onDblClick?: ((object: Object3D) => void) | null;
   onRightClick?: ((object: Object3D) => void) | null;
}
```

BaseSelectOptions

选中模型的基础参数

```
interface BaseSelectOptions {
  color?: IColor;
  opacity?: number;
}
```

BaseHelperOptions

helper 的基础参数

```
interface BaseHelperOptions {
  id: string | number;
}
```

localhost:8081/guide/types.html 6/7

Interpolate

线性插值

```
interface Interpolate {
   t: number;
}
```
