■ SoonSpace.js 2.x

通用对象

v2.4.3 之后,统一了对象的检索和删除方法

getObjectByld

通过 id 查找

定义:

```
function getObjectById<T extends Object3D = BaseObject3D>(
  id: BaseObject3DInfo['id']
): T | null;
```

用法:

```
const object = ssp.getObjectById('object_id');
```

getObjectByName

通过 name 查找

定义:

```
function getObjectByName<T extends Object3D = BaseObject3D>(name: string): T[
```

localhost:8081/api/object.html 1/4

≡ SoonSpace.js 2.x

用法:

```
const objectList = ssp.getObjectByName('object_name');
```

js

getObjectByUserDataProperty

通过 userData 属性查找

定义:

```
function getObjectByUserDataProperty<T extends Object3D = BaseObject3D>(
  property: string | UserDataPropertyFindFunc,
  value: any
): T[];
```

用法:

```
const objectList = ssp.getObjectByUserDataProperty('propKey', 'propVal')
// or
const objectList = ssp.getObjectByUserDataProperty(item => item['itemPropKey'
```

参数:

propNameOrFindFunc

- 描述: userData 内属性名或 find 函数
- 类型: string | function
- 必填: 🗸

localhost:8081/api/object.html 2/4

■ SoonSpace.js 2.x

propValue

• 描述: userData 内属性值。

• 类型: any

• 必填: 🗡

find 函数使用场景

```
object.userData = {
  people: {
    name: 'xiaoming',
    age: 18,
  },
};
const objectList = ssp.getObjectByUserDataProperty(
    (userData) => userData.people?.name === 'xiaoming'
);
```

removeObjectById

通过 id 移除

定义:

```
function removeObjectById(id: BaseObject3DInfo['id']): boolean;
```

用法:

```
ssp.removeObjectById('object_id');
```

localhost:8081/api/object.html 3/4

■ SoonSpace.js 2.x

localhost:8081/api/object.html 4/4
